The tank further has liquid drain outlets formed by threaded connections (20) that are flanged into the tank wall (6) at the bottom thereof. A threaded connection can also be provided as a filling inlet on the top cover of the tank, and a further flange (22) is provided for attaching an over-pressure valve to release air.

5) The Examiner is requested to consider all references of record, return an initialed copy of the enclosed Form PTO-1449 and ensure that all references of record are printed on any patent issuing from this application.
